

CONCENTRIC VENT

Condensing Gas Furnace Kit

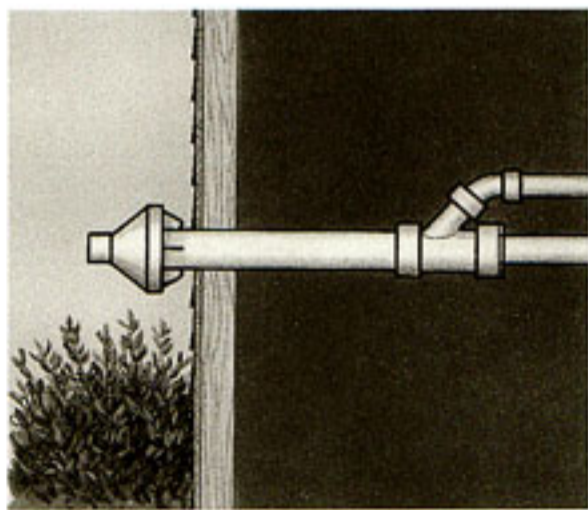

A CLEANER LOOK FOR YOUR TWO-PIPE INSTALLATION.

Concentric venting provides a professional appearance for your indoor weather system.

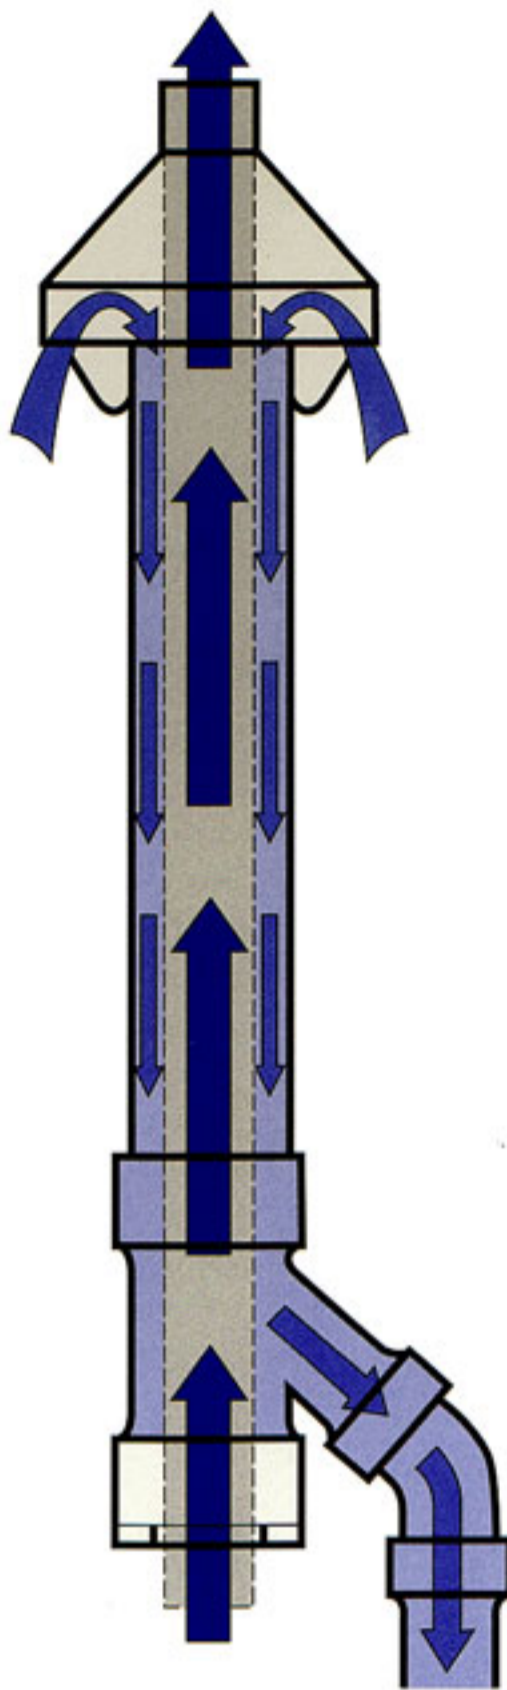

the finishing touch

Carrier understands that homeowners want maximum comfort and energy savings from their indoor weather system. That is why we offer WeatherMaker Infinity and WeatherMaker 9200 condensing gas furnaces.

These top-of-the-line furnaces incorporate sealed combustion, a two-pipe system that reduces noise, adds reliability and helps eliminate drafts. Because cleaner, outdoor air is used for combustion, furnace operation is more reliable. Use of outdoor air also helps eliminate cold drafts that are associated with furnaces that use indoor air for combustion. The result is enhanced heating a homeowner can count on. To fully enjoy the quiet, efficient heating of our high-performance furnaces while maintaining the looks and integrity of your home, we recommend the concentric vent. Carrier's concentric vent is a pipe within a pipe that allows installation without requiring two separate pipes running out of your home.

Through-the-wall installation

The concentric vent combines the two-pipe combustion system so it exits through one pipe that runs through a sidewall or roof. The outer pipe draws fresh combustion air into the system. The inner pipe carries the vent gases outside the home.

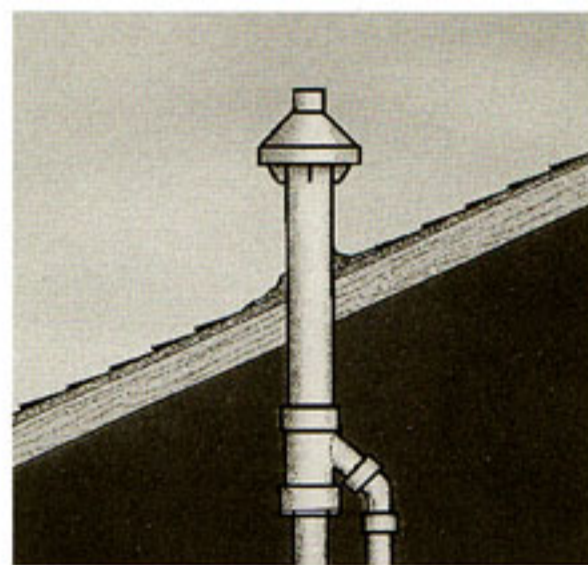

innovation

The design is simple. Vent gases flow through the inside pipe while fresh combustion air flows through the outer pipe. Since the concentric vent takes a two-pipe vented furnace and exits your home through one pipe, installation is easier, takes less time and looks good both inside and outside the home.

For installation flexibility, the concentric vent can run through a sidewall or the roof. Either way, it provides a cleaner, more finished appearance to a high-performance furnace installation.

commitment

Carrier is committed to offering the best in home comfort equipment. With a high-performance furnace and the concentric vent, your indoor weather expert can provide you with a professional installation.
